MINEUTE™ MC100

THE SAFEST, MOST VERSATILE, MOST RELIABLE, AND MOST ERGONOMIC MINING UTILITY VEHICLE IN THE WORLD TODAY.
ENGINEERED FOR TOUGHNESS, THE MC100 IS RENOWNED FOR ITS DURABILITY AND EFFICIENCY.

THE MC100 MINING UTILITY VEHICLE IS DESIGNED AND BUILT JUST FOR UNDERGROUND MINING.

Not an adapted, converted, or modified vehicle, this utility vehicle is built from the ground up. We use advanced technology with proven components to make a vehicle that simply outperforms the competition in all categories.

The MC100 has a proven track record in the mining industry:

- Highly successful safety record
- Units operating with over 20,000 hours in the field
- 3x the life of other tractor type utility vehicles.
- Unsurpassed for reliability and availability

Safety features include:

- Improved line of sight for greater visibility for safer material handling
- Superior operator ergonomics
- All MC100s are ramp certified
- All units extensively tested for stability

Above industry standard components, including:

- Turbo charged, 4 cylinder engine. Reliable and exceeds underground emission standards (MSHA and CANMET approved)
- Powershift fully synchronized 4x4 transmission
- Proven industrial type front and rear axles with enclosed wet discs and SAHR type braking
- Ergonomically designed operator compartment with easy read gauges and fire-resistant wiring
- Flip-open hood design for quick maintenance access
- Vehicle conforms to EN 1889 -1:2011 and available with FOPS/ROPS certified enclosed cab

Our modular frame design eliminates the need to cut and re-weld the machine underground, while allowing:

- Reduced costs of underground commissioning
- Easier attachment change
- The ability to transport underground in the smallest of cages
